

## **Bactivate**

# The best products for growing great results

Bactivate is a Microbial Soil Conditioner composed of five specific bacillus species that enhance plant growth and health

These beneficial rhizobacteria promote plant growth directly and/or indirectly by:

- Facilitating nutrient uptake
- Accelerating mineralization
- Reducing plant stress
- Providing nitrogen fixation
- Promoting other beneficial micro-organisms such as 'mycorrhizal fungi'; and
- reducing the impact of plant and soil disease.

### Bactivate:

- Can be broadcast through normal spreading machines (low rotation needed)
- Can be stored up to 3 years (covered, dry and out of direct sunlight)
- Is easy to apply

### Application Rate

Bactivate is not a generic plant food or agricultural chemical. Please contact your Bactivate distributor for a protocol for your specific needs. For more information on Bactivate and other BactiGro Australia products, visit [www.bactigroaustralia.com](http://www.bactigroaustralia.com)
